

Schletter Guarantee Certificate

10-year guarantee

in accordance with our terms of guarantee*

We **guarantee** that the metal components of the photovoltaic fastening system you purchased directly from Schletter are free from production-related material faults that would affect the structural safety of the photovoltaic fastening system within the guarantee period not just insignificantly even with correct structural analysis and proper installation, operation and maintenance of the photovoltaic fastening system.

In case of a guarantee claim, we will either repair or replace the metal parts ourselves or we will assign a third party to do that on our behalf. Costs for disassembly, reassembly and transportation of components as well as further indirect costs, especially consequential harm caused by a defect are **not included**.

This guarantee **applies only** to the original buyer who purchased these components after September 8, 2015 and only if the guarantee has explicitly been declared applicable for the specific contractual relationship by attaching this guarantee certificate or in some other written form (especially by letter, email, a guarantee seal on the merchandise or in the product sheet). The legal regulations regarding liability for defects and product liability remain unaffected by this guarantee.

Please look up the **details** of the guarantee as well as possible **exemptions** on our homepage www.schletter.eu under "Our general terms and conditions".
